Confirmation

Hereby we confirm for our coating system: BAL 101 / BAL 101-60

Food contact statements according to region:

EU

- F-B-S can state for the finished coatings that they comply with the EU regulation 1935/2004 for food contact materials. All pigments used are suitable for food contact in the EU, according to CoE Resolution AP (89) 1.
- The coatings comply with EU Plastic Regulation 10/2011, including amendment COMMISSION REGULATION (EU) 2025/351. In the area of food contact materials, plastic materials and articles are regulated by Regulation (EC) 10/2011, which means harmonized requirements and measures are available. Varnishes, coatings and printing ink materials do not have such specific EU harmonized legislation. These groups of materials are subject to the general requirements of the framework Regulation (EC) 1935/2004 and where existing, to relevant member state legislations. Since the plastics Regulation provides an extensive list of evaluated substances, it is often used for coatings as regulatory reference, e.g., for specific migration limits (SML) and overall migration limits (OML). As explained, these limits are not legally binding for our products.

USA

- F-B-S can state that the components of the above-mentioned coating systems are compliant under FDA as direct food additives for food contact materials, according to '§175.300 Resinous and polymeric coatings' which may be safely used as the food contact surface of articles intended for use in producing, manufacturing, packing, processing, preparing, treating, packaging or holding food.

F-B-S Balke International GmbH & Co. KG
Postfach 190169 · 42653 Solingen · Germany

F-B-S Balke International GmbH & Co. KG

- Where applicable, included fluoropolymers fulfil the requirements of 21 CFR § 177.1550.
- All used pigments are compliant with 21 CFR § 178.3297.
- The finished article has to be tested according to 21 CFR 175.300.

When these coatings are applied correctly, taking into account good manufacturing practices, and all solvents and evaporable substances are removed, they are suitable for food contact. Required is that the usage specifications, as provided by ILAG via technical advice- and data sheets, such as processing temperature, process requirements, compatibility with other materials, are followed up. The required conformity tests with the food contact regulations must be carried out on the finished product and is thus the responsibility of parties who place the finished product on the market.
